Hello CORTX Community! We're here with your monthly update of everything CORTX related. It's a bit short and sweet for the month of December, but we have some exciting developments to share.

Meet the Architect
Our next Meet the Architect will be this Thursday on December 3rd at 8am Pacific. Basavaraj Kirunge will be joining us to discuss the architecture of the S3 layer and explain how it interfaces with the Motr layer, with Q&A to follow.
If you missed last month's Meet the Architect with Nikita Danilov on Motr, the entire session is now available on Youtube.

Lyve Labs Hackathon
Our first hackathon is in full swing! Hosted by Lyve Labs in Israel, we have challenged the participants to build new integrations with CORTX. Final submissions will be coming in Dec 10th, so stay tuned and keep an eye out for new integrations.
If you are interested in participating in future hackathons, either as a participant, judge, or mentor, please let us know! We are planning to host a global virtual hackathon in February. And if you have an idea for a hackathon challenge, drop us a line at cortx-questions@seagate.com. We are hoping to have a full schedule of hackathons for 2021, and we would love to hear from the CORTX community and hear your ideas.

Motr Developer Guide
We are excited to announce we have released a new developer guide for Motr by Hua Huang, a long-time Motr architect. This guide provides the information necessary to create custom Motr client applications. We'd love to know what you think.

CORTX Discussions on Github
Join us on Github for CORTX Discussions. This is the CORTX message board / mailing list / Q&A hub. Github recently made some updates to their notification settings that have greatly increased the usability of the Discussions feature. Check it out here.

That's all for this month! Thank you, and please let us know if you have any questions, comments, or feedback.

Best,

Rachel Novak (she/her)
CORTX Community Manager
